

A Division Of WayPoint, Inc.

Corporate Overview

Legache is an independent technology startup firm that provides advanced data analytics solutions to complex high-stakes industries such as law, compliance, energy, and technical research.

Cassandra, our flagship product, is an Information Relationship Management (IRM) system that executes source-anchored reasoning pipelines over unstructured records, ensuring every output remains traceable to primary evidence.

Built for SCIF environments and deployable in one line of code, our technology is designed to support decision makers when assurance is non-negotiable. Modern analytics systems summarize data but cannot scale with complexity or guarantee defensibility, Cassandra can.

Specialization

-  AI Strategic Decision Support
-  Compliance Alignment
-  Leveragable Data Asset Construction
-  Archival Unification and Integrations
-  SCIF Deployable Solutions

Past Performance

WayPoint, Inc. is a U.S. based aerial data services provider with over ten years of operational experience delivering FAA-compliant commercial drone operations.

Legache, a division of WayPoint, has provided critical data analysis support to researchers in New Mexico higher education institutions. The executive team has a decade of experience in strategic institutional partnership implementation. Below are some of the clients we have served.
